BOSS II

Take command of your square bale processing needs with the BOSS II from Tubeline.

The BOSS II is the perfect tool for all of your Square bale processing needs. From bedding to feeding, the BOSS II can manage it all.

The BOSS II is fully adjustable to fit 3'x3', 3'x4' and 4'x4' square bales up to 8' long monsters. The adjustable distribution chute allows the same machine to bed livestock with bales of straw then feed into bunkers or even windrow with only a quick adjustment. The adjustments don't stop there. The BOSS II is also equipped with adjustable blades that help to further chop up bedding material for a finer, more consistent spread.

The hydraulic feed is also adjustable, allowing you to control the flow and speed of feeding. The flail roller is PTO-driven and adaptable to either 540 or 1000 RPMs, while the upper paddle roller is hydraulically controlled and also fully adjustable. The hydraulic self-loading forks allow you to load one bale and have another standing by ready to go.

Adjustable Distribution Chute

Top paddle roller

Adjustable cutting knives

Cut material as small as 4.5 inches (optional)

Adjustable Hydraulics

Belt Tensioner

Whether you need a processor for bedding, feeding, or both, make an executive decision and leave it to the BOSS II for all your square bale processing needs.
